PROGRAM SECTION II --- Non-RCRA Regulated Waste

1. Regulatory citation

This Program Section for the management of Used Oil and Asbestos Waste has been developed to comply with 6 NYCRR 374-3 and 6 NYCRR 364.

2. Applicability

The program Section was developed specifically for the facilities operations departments at the locations indicated which generate wastes for the reasons indicated.

Facility Operations – Used oil from machinery and waste asbestos from repair or demolition activities.
   Rose Hill
   Lincoln Center

3. Registration and reporting requirements

There is no registration or reporting requirement associated Non-RCRA regulated waste.

4. Waste Analysis

None other than identification as used oil or asbestos waste.

5. Management

a. Administration

Compliance with the requirements of this program is the responsibility of the individuals filling the below listed positions or any successor to these positions.

- Facilities Operations - Rose Hill Director
- Facilities Operations - Lincoln Center Director
- Facilities Operations- Calder Center Director

The Program Administrator will inspect, audit and advise these Department representatives.

b. Storage

Used oil may be accumulated and stored for an indefinite period as long as it is in an appropriate container and is stored in a manner which would prevent its contents from being released to the environment in the event of a spill. The containers must be clearly marked as “Used Oil”.
Asbestos waste should normally be collected and disposed of by a certified asbestos abatement contractor as part of a contracted asbestos abatement project. The University has developed a standard Asbestos Abatement Contract which must be utilized whenever an asbestos abatement contractor is hired. In the event a small amount of asbestos waste is generated due to piping or plumbing work, the waste should be sealed in a clearly marked bag or container until such time as it can be removed by a certified asbestos abatement contractor during a subsequent asbestos abatement project.

Storage locations for used oil and asbestos are as follows:

Rose Hill: Thebaud Hall Main Boiler Room  
Lincoln Center: Leon Lowenstein Hall Machine Room 5

c. Training

All persons involved in the handling of used oil and asbestos waste must receive training which covers this management plan as well as the use of safety equipment, spill clean up materials and equipment, fire prevention equipment, and container labeling nomenclature.

d. Record Keeping

There are no recordkeeping requirements associated with Non-RCRA Regulated Waste.

e. Disposal

All used oil and asbestos waste must be picked up by a certified regulated waste transporter for recycling/disposal at a facility authorized to conduct such activity.
