A settlement house is a community center that “strengthen[s] individual and neighborhood assets, and build[s] collective capacity to address community problems.”

— Beverly Koerin, 2003

THE NEW WEST SIDE

PUBLIC INVESTMENT
No. 7 Subway Extension: $2.4 BILLION
Moynihan Station Renovation: $267 MILLION
Javits Center Renovation: $465 MILLION
The High Line: $190 MILLION
Hudson River Park: $440 MILLION
Hudson Park & Boulevard: $30 MILLION

MEET THE NEW HUDSON YARDS NEIGHBORHOOD, IN THE NEW HEART OF NEW YORK

Strategically located between 10th and 12th avenues from West 30th to West 34th Street, Hudson Yards is the center of the metropolitan region with unsurpassed connections to commuter rail service, the subway system, the West Side Highway, the Hudson Tunnel and ferries along the Hudson River. The extension of the No. 7 Subway line, opened in 2015, arrives at Hudson Yards’ front door.

In the nexus of Chelsea and Midtown West, this dynamic neighborhood is next to chic art galleries, award winning restaurants, popular bars and nightlife venues, and highly respected international fashion and design.

The neighborhoods surrounding Hudson Yards, including Chelsea, West Chelsea and Hell’s Kitchen are buzzing with chic art galleries, innovative restaurants and bars, and highly respected international fashion and design. City dwellers hungry for a taste of the outdoors now have a variety of green spaces to explore including the much-celebrated High Line, Hudson River Park and Hudson Park & Boulevard. With the new No. 7 Subway extension open as of fall 2015, getting to Hudson Yards will be fast and easy.

The Hidden Horror of Hudson Yards Is How It Was Financed

KIRSTON CAPPES  APR 12, 2019

Manhattan’s new luxury mega-project was partially bankrolled by an investor visa program called EB-5, which was meant to help poverty-stricken areas.

Since its official unveiling last month, critics have been teeing off on Hudson Yards, the $25 billion office-and-apartment megaproject on Manhattan’s West Side. The Guardian’s Oliver Wainwright calls it “bargain-basement building-by-the-yard stuff that would feel more at home in the second-tier city of a developing economy.” In Carved, Alexandra Lange writes that it suffers from “no contrast. No weirdness, no wildness, nothing off-book.” The New York Times’ Michael Kimmelman describes it as a “vast neoliberal Zion.”

NYU CUSP, Related Companies, And Oxford Properties Group Team Up To Create “First Quantified Community” In The United States At Hudson Yards

Collection of Big Data to Inform New York City and Cities Around the World and Allow Hudson Yards to Continue to Optimize, Innovate, and Enhance User Experience

New York University's Center for Urban Science and Progress (CUSP) today announced that it will partner with Related Companies and Oxford Properties Group to create the nation's first “Quantified Community” - a fully-instrumented urban neighborhood that will measure and analyze key physical and environmental attributes at Hudson Yards.
The circuitous collection and re-presentation of data on everything except matters of injustice so as to un-know, un-see, and displace public problems from public knowledge.

Photo: Time Magazine, 2016
“Minor theory can scratch at major theory from a range of different positions but its claims are interstitial, and minor and major both must be joined to oppose inequality, injustice, impoverishment, and oppression effectively. […] Minor theory is at once multiply porous and a way to squeeze; it opens possibilities as it distills new kinds of knowledge.”

— Cindi Katz, 1996

SERVICE LEARNING NOTES

Kelly Martin, a sophomore at Fordham University majoring in New Media Digital Design, with a minor in Political Science, I have worked at the Lincoln Square Community Center to help youth and young adults. We have read texts relating to the creation of smart cities, racial inequalities, and the impacts of smart cities on different communities. The experiences I had volunteering were directly and indirectly related to what we learned in the classroom. Our goal is to help the community with new technology and teach basic computer skills. We organized together to find out what the community wanted to know, designed programs for them and provided the tools to help the frontier. What programs can we provide for them and why?

WEEK 5: A NEED FOR SPACE

On Friday morning, I worked with Gia again, but instead of alphabetizing Gia or doing any office work, I helped her unpack her entire office in its new location. To make room in her old location, she moved her desk and all of her belongings to the back of the room on the second floor behind the long table. Gia explained to me that this is always an issue at LSNC - there is always a need for more space so that they may properly serve the community. Although this new space is bigger and roomier for Gia, it lacks a door and therefore any privacy. In “Network Connectivity and Labor Systems” by Dan Schiller, he talks about the long-term progression of the labor process noting that it grew from handcraft labor to manufacture labor to large-scale industry labor. While going through some of the Gia’s files and figuring out where to put them, I noticed that - although not necessarily producing something - a lot of how LSNC records their data and information is done by hand, therefore putting them in the handcraft labor category. Because there is no door, there is also a lack of security - something that doesn’t feel like should be of much importance at a center that serves the community based on empathy and compassion, but because things like a computer or a printer is

ENTRY FOR WEEK FIVE

This week, I went to the LSNC from 4-6 pm on Friday. I worked with after school program for the entirety of my visit. The first hour was spent just watching the kids make art and help out if any of them needed to use the bathroom. It is important to note that all of the water fountains are still broken, so the kids still do not have access to water while they are there. This was also the same case a few weeks ago, making it clear that basic needs are not always met due to infrastructure issues. Luckily, I got to witness the kids go to their “gym”, which was a lot of fun to observe. I watched over the samba drumming club, which was led by two instructors and involved 8 kids total. The kids were clearly having a ton of fun; of them noted it was the best time they’ve ever had in the after school program. It definitely helped that the instructors were incredibly passionate and experienced with the art form. They connected its African roots with a lesson about Black History Month in general. After further research, I learned that the coaches who came to teach were actually from an organization called Harlem Samba. Their organization currently teaches over 250 students at public schools in Harlem. It made me reflect on the importance of art and music for young kids. I hope

A TALE OF TWO SCHOOLS

For two sharply divided Manhattan schools, an uncertain path to integration

P.S. 191 and 199 are neighbors with glaring disparities. Competing plans could help integrate the schools, but not everyone is on board.
