Behind every great financial-services firm, one finds great quantitative analysts. The **MS in Quantitative Finance** program prepares students to fill these crucial roles, teaching them how to construct models, analyze data, and write programs. In addition to multiple programming languages, the curriculum covers mathematical and statistical modeling techniques, as well as financial technology, all framed in the context of actual financial problems.

APPLIED AND EXPERIENTIAL LEARNING

- Internship opportunities in top financial-services firms in New York City
- Seminar series with leading industry professionals
- Research opportunities in machine learning, algorithmic trading, and financial analytics

EXTRACURRICULAR ENGAGEMENT

- The **Fordham Quantitative Finance Society** aims to elevate students' technical skills. Ongoing networking nights help students to best position themselves for the top financial-services firms.
- **Research Centers:**
 - Center for Research in Contemporary Finance
 - The Frank J. Petrilli Center for Research in International Finance
